

Car and DC/AC 230V Inverters Quick Start Guide

2. Application

This product is designed to power the 220/230V devices from car installation or DC 12, 24 and 48V.

3. Unit setup and operation

- Connect the device to car cigarette lighter socket or - in case of devices with higher power rating - directly to the battery.
- Connect the device to be powered to the inverter.
- Turn on the power using a button on the device, if the device has it.

4. Precautions

- Do not exceed the rated operating parameters.
- Dangerous voltages may still exist in the power supply even after few minutes from turning off the power.
- All warranty and post-warranty repairs can be only performed by the supplier service provider or specialized unit authorized by the manufacturer.
- Pay attention to the polarity of the device power socket.
- To avoid electric shock, follow the instructions below:
 - Do not open the housing of the power supply when it is connected to the power source,
 - Do not touch the inside components of the unit in operation - risk of electric shock or burns,
 - Do not connect the adapter to the power supply if the power cord is damaged,
 - Do not connect the adapter to the power supply until all connections are made correctly,
 - Never let the device to get wet or to have any contact with liquids,
 - Do not place the device near heat sources, and in areas of high humidity,
 - The device may interfere with radio and television sensitive equipment located nearby.
- Do not use the device if it emits smoke, an abnormal smell or strange sounds.
